JPW> I would like to purchase a 2m handheld. I would like DTMF (repeater  
JPW> work), good power (5W?) and some features (memories, etc).  
My best suggestion, for the most features, in a small package, at the  
price range you mentioned, would be the Radio Shack htx202. Good radio,  
the BEST intermod protection available, and has been known, (lately) to  
go on sale for 199.00

I do not work for Radio Shack, nor do I want to. The radio just happens  
to be a excellent deal for the price!

In order to enhance my freeware program for Morse training on Macintosh computers I need information on how you usually learn Morse and how it may be improved. When applicable I want the name of the methods and maybe some background.
